National Field Services Receives State of Oklahoma Engineering License

Lewisville, TX (August 17, 2012) - National Field Services (NFS) has received its engineering license from the state of Oklahoma.

This license will allow NFS to provide engineering services to others in the state as long as all regulations are met and the certification remains valid.

“Obtaining this license is great for NFS,” says Operations Manager Eric Beckman, “we will now be able to reach out and expand our quality service to the Oklahoma market. Hopefully this is just the first step in a plan to expand our service offerings to other neighboring states as well.”

National Field Services is an industry-leader in on-site electrical testing, offering a broad range of electrical solutions from our team of NETA-certified technicians and professional engineers. NFS also provides power system studies, startup and commissioning, reliability testing and maintenance, and disaster recovery services for all power systems. www.natlfield.com.
